

RIVER MURRAY FLOW REPORT

Public I2 A2

Report #28/2014

Issued 10:00 am 11 July 2014

This supersedes the previous flow report issued by the Department of Environment, Water and Natural Resources (DEWNR) on 4 July 2014. The next flow report, including water resources update, will be provided on Friday, 18 July 2014.

In this report, for ease of representation, large volumes of water are expressed in gigalitres (GL), while smaller volumes are expressed in megalitres (ML). One GL is equal to 1 000 ML.

FLOW OUTLOOK

The flow at the South Australian border is approximately 4 500 ML/day and will remain around this rate during the coming week, depending on upstream river and storage operations, extractions, and rainfall events. The flow comprises the normal July Entitlement Flow of 3 500 ML/day plus additional water due to recent rainfall events. Recent rainfall in north-eastern Victoria may provide South Australia with a short period of unregulated flow in late July 2014.

Construction works at the Lake Victoria outlet regulator will continue during July 2014. These works are restricting the outlet capacity. DEWNR is working closely with the Murray-Darling Basin Authority and SA Water to manage the flow to South Australia during this time.

The flow over Lock 1 is approximately 3 800 ML/day and will remain around this rate during the coming week, depending on weather conditions and extractions.

It is important to note that flow forecasts in this advice are based on the information available at the time of preparation. They may change as new gauging information becomes available, or due to rainfall events or changed operations upstream. Flow forecasts are dependent on predictions made by the Bureau of Meteorology, Murray-Darling Basin Authority and water management agencies in upstream jurisdictions. They will be revised as new information becomes available.

MANAGEMENT OF SOUTH AUSTRALIA'S DEFERRED WATER

On 1 May 2014, South Australia had deferred 30 GL of its Entitlement Flow into storage to meet critical human water needs use in future dry years and 20 GL for private carryover use in future dry years. The volume of deferred water in the upstream storages is adjusted for net evaporation losses until it is delivered to South Australia. There is currently a high risk of some private carryover water spilling from Lake Victoria due to recent rainfall and water level limits related to the works on the outlet regulator. South Australia is not proposing to defer any additional water while the Entitlement Flow remains low and the risk of spill from Lake Victoria remains high.

DEWNR is investigating opportunities to defer additional Entitlement Flow during 2014-15.

BARRAGE OPERATIONS AND WATER LEVELS IN THE LOWER LAKES

The water level in Lake Alexandrina is approximately 0.70 m AHD and approximately 0.78 m AHD in Lake Albert. The main reason for the difference between the water levels is wind effect. The volume of water in the Lower Lakes is being managed to optimise water availability for continuous barrage releases during winter. SA Water will continue to operate the barrages to minimise any negative salinity impacts from reverse flow events. When conditions are conducive to opening the barrages, releases will be prioritised through Tauwichee and Goolwa. All fishways are in operation.

To see live salinity data at various locations on the River Murray and in the Lower Lakes, please refer to the following website: <http://www.waterconnect.sa.gov.au/Systems/RTWD/SitePages/Home.aspx>

Water levels and barrage operations are monitored closely by various agencies of the South Australian Government, Murray-Darling Basin Authority and Commonwealth Environmental Water Office.

WATER QUALITY – Blue-Green Algae

Due to recent rainfall and inflows, most of the interstate red alert warnings for toxic blue-green algae have been lifted. The New South Wales Government (through Regional Algal Coordinating Committees) still has a red alert warning for toxic blue-green algae at Balranald on the Murrumbidgee River, where water is unsuitable for recreational and stock watering purposes.

Although toxic blue-green algal blooms pose no threat to South Australia at this stage, the Murray-Darling Basin Authority and the relevant South Australian Government agencies are regularly monitoring the situation.

NAVIGATION ISSUES

Sandbars in the vicinity of the Murray Mouth may cause navigation hazards. Mariners are advised to navigate with caution when operating in the area. Sandbars are also present along sections of the River Murray, downstream of Lock 7 and 8 and in South Australia. All watercraft users should be aware of the risk of submerged navigation hazards, and should regularly check the river depth.

CONSTRUCTION WORKS

Swan Reach River Vessel Waste Disposal Station

Swan Reach River Vessel Waste Disposal Station remedial works are now complete and the station will be operational Saturday, 12 July 2014.

Lock 4

Remedial works at Lock 4 commenced on 5 May 2014 and are expected to be completed by early August 2014. The works are necessary to improve the structural integrity of the Lock chamber. During this period Lock 4 will be closed to navigation.

Mullaroo Creek

Due to recent rainfall, remedial works in the Mullaroo Creek (located in Victoria and flows into the Lindsay River, which enters the River Murray between Lock 6 and 7) have been postponed until access conditions improve.

Chowilla

Construction of the Chowilla Creek Environmental Regulator and associated structures is nearing completion. For public safety reasons, the Chowilla Creek remains closed to navigation at the construction site at this time.

Lake Victoria Outlet Regulator

Remedial works on the Lake Victoria Outlet Regulator are underway and expected to be completed around the end of July 2014. The works are necessary to improve the structural integrity of the regulator.

Camping is not allowed in the area immediately downstream of the regulator during the construction period. There are alternate camping sites nearby, along Rufus River.

Lock 11

Installation of mechanised gates at Lock 11 (Mildura) will commence on 15 July 2014 and is expected to be completed in mid-August 2014. During this period the water level in the Lock 11 weir pool will be drawn down to a very low level and the Lock will be closed to navigation.

RIVER MURRAY WATER LEVELS

Below is a table of River Murray water levels at a number of locations from Lock 10 (near Wentworth) to Murray Bridge.

River Murray Water Levels on 9 July 2014

Location	River km	Normal Pool Level	Current Level (m AHD)	1974 Flood Level (m AHD)	1993 Flood Level (m AHD)
Lock 10	825.0	30.80	30.79	33.81	33.32
Lock 9 Kulnine	764.8	27.40	27.50	30.03	29.44
Lock 8 Wangumma	725.7	24.60	24.58	27.60	27.19
Lock 7 Rufus River	696.6	22.10	22.09	25.70	25.24
Lock 6 Murtho	619.8	19.25	19.27	21.03	20.50
Renmark	567.4	-	-	18.54	18.04
Lock 5	562.4	16.30	16.39	18.07	17.50
Lyrup	537.8	-	13.27	16.85	16.26
Berri	525.9	-	13.24	15.81	15.74
Lock 4	516.2	13.20	13.23	15.65	15.08
Loxton	489.9	-	10.13	15.05	14.12
Cobdogla	446.9	-	-	13.44	12.38
Lock 3	431.4	9.80	9.93	13.16	12.02
Overland Corner	425.9	-	6.42	12.73	11.58
Waikerie	383.6	-	-	11.26	10.24
Lock 2	362.1	6.10	6.31	10.28	9.30
Cadell	332.6	-	-	9.17	8.08
Morgan	321.7	-	3.43	8.85	7.65
Lock 1 Blanchetown	274.2	3.20	3.38	6.81	5.38
Swan Reach	245.0	0.75	0.73	6.06	4.51
Mannum PS	149.8	0.75	0.69	3.15	1.90
Murray Bridge	115.3	0.75	0.65	2.06	1.26

Note that the above water levels may be affected by local wind conditions.
