

# RIVER MURRAY FLOW REPORT

Public I2 A2

Report #7/2014

Issued 10:00 am 14 February 2014

**This supersedes the previous flow report issued by the Department of Environment, Water and Natural Resources (DEWNR) on 7 February 2014. The next flow report, including the water resources update, will be provided on Friday, 21 February 2014.**

In this report, for ease of representation, large volumes of water are expressed in gigalitres (GL), while smaller volumes are expressed in megalitres (ML). One GL is equal to 1 000 ML.

## FLOW OUTLOOK

The flow at the South Australian border is approximately 7 000 ML/day and will decrease to around 5 200 ML/day during the coming week, depending on upstream river and storage operations, extractions, and rainfall events. The flow comprises the February Entitlement Flow of 6 929 ML/day, with additional February Entitlement Flow delivered early, minus deferred Entitlement Flow of 240 ML/day.

South Australia's February Entitlement Flow is being delivered in an altered daily pattern, which will result in additional water in the first half of the month and less water in the second half. This is necessary as remedial works on the Lake Victoria Outlet Regulator are expected to commence in late February 2014, which will reduce the daily volume of water able to be delivered to South Australia. Early works on the regulator will require the water level between Lock 6 and Lock 7 to be decreased by 0.5 m and then recover over a 24 hour period. This daily cycle will commence on 21 February and is expected to finish around 24 February.

South Australia is working with the Commonwealth Environmental Water Holder to seek opportunities to deliver additional environmental water in autumn.

On 1 February 2014, South Australia has 30 GL of its Entitlement Flow stored in the upstream (interstate) storages for critical human water needs (CHWN) use in future dry years. South Australia has requested that the Murray-Darling Basin Authority defer and store an additional 6.8 GL of South Australia's Entitlement Flow in February 2014 for private carryover use.

The flow over Lock 1 is approximately 3 500 ML/day and will decrease to around 2 800 ML/day during the coming week, depending on weather conditions and extractions.

It is important to note that flow forecasts in this advice are based on the information available at the time of preparation. They may change as new gauging information becomes available, or due to rainfall events or changed operations upstream. Flow forecasts are dependent on predictions made by the Bureau of Meteorology, Murray-Darling Basin Authority and water management agencies in upstream jurisdictions. They will be revised as new information becomes available.

## BARRAGE OPERATIONS AND WATER LEVELS IN THE LOWER LAKES

The water level in Lake Alexandrina and Lake Albert is approximately 0.60 m AHD. The volume of water in the Lower Lakes is being managed to maximise water availability for continuous barrage releases during the remainder of summer. Barrage releases are being prioritised through Tauwichee. All fishways are in operation. SA Water will continue to operate the barrages to minimise any negative salinity impacts from reverse flow events.

To see live salinity data at various locations on the River Murray and in the Lower Lakes, please refer to the following website: <http://www.waterconnect.sa.gov.au/Systems/RTWD/SitePages/Home.aspx>

Water levels and barrage operations are monitored closely by various agencies of the South Australian

Government, Murray-Darling Basin Authority and Commonwealth Environmental Water Office.

## **WATER QUALITY**

The New South Wales Government (through Regional Algal Coordinating Committees) has issued red alert warnings for toxic blue-green algae at:

- Menindee Lakes and the Great Darling Anabranch at, and upstream of, Tara Downs, where the water is unsuitable for domestic, irrigation and recreational purposes;
- Griffiths and Wagga Wagga on the Murrumbidgee River, where the water is unsuitable for recreational purposes; and
- Hay on the Murrumbidgee River, where the water is unsuitable for domestic, irrigation and recreational purposes.

Although these toxic blue-green algal blooms pose no threat to South Australia at this stage, the Murray-Darling Basin Authority and the relevant South Australian Government agencies are regularly monitoring the situation. It is not uncommon to experience algal blooms at this time of the year.

## **NAVIGATION ISSUES**

Sandbars in the vicinity of the Murray Mouth may cause navigation hazards. Mariners are advised to navigate with caution when operating in the area. Sandbars are also present along sections of the River Murray in South Australia and all watercraft users should be aware of, and regularly check, the river depth.

## **CONSTRUCTION WORKS**

### *Lake Victoria Outlet Regulator*

Remedial works on the Lake Victoria Outlet Regulator are expected to commence in late February 2014 and be completed around June 2014. The works are necessary to improve the integrity of the regulator.

### *Mullaroo Creek*

Remedial works in the Mullaroo Creek (located in Victoria and flows into the Lindsay River, which enters the River Murray between Lock 6 and 7) will commence in late February 2014 and be completed around June 2014. The works are necessary to improve the control of flows in this system. For public safety reasons the Mullaroo Creek will be closed to navigation at the work site during this period.

### *Lock 4*

Remedial works at Lock 4 are scheduled to commence early May 2014 and be completed around early August 2014. During this period Lock 4 will be closed to navigation.

### *Lock 11*

Installation of mechanised gates at Lock 11 (Mildura weir pool) is scheduled to commence in mid-late May 2014 and be completed in June 2014. The installation is expected to take about three weeks. During this period Lock 11 will be closed to navigation.

### *Currency Creek*

Subject to confirmation by the Commonwealth Government under the *Environment Protection and Biodiversity Conservation Act 1999* (Cwlth), water-based works to remove the Currency Creek Regulator are completed and the boating exclusion zone has been removed. Disposal of the stockpile of rock material that was removed from the regulator has commenced.

### *Chowilla*

Construction of the Chowilla Creek Environmental Regulator and associated structures is ongoing. For public safety reasons the Chowilla Creek remains closed to navigation at the construction site. Works are also underway to upgrade the weirs on Pipeclay Creek and Slaney Creek to improve the management of flows into the Chowilla anabranch and to enable fish passage. The weirs are closed to boat traffic during this construction program.

## RIVER MURRAY WATER LEVELS

Below is a table of River Murray water levels at a number of locations from Lock 10 (near Wentworth) to Murray Bridge.

### River Murray Water Levels on 12 February 2014

Location	River km	Normal Pool Level	Current Level (m AHD)	1974 Flood Level (m AHD)	1993 Flood Level (m AHD)
Lock 10	825.0	30.80	30.83	33.81	33.32
Lock 9 Kulnine	764.8	27.40	27.43	30.03	29.44
Lock 8 Wangumma	725.7	24.60	24.16	27.60	27.19
Lock 7 Rufus River	696.6	22.10	22.16	25.70	25.24
Lock 6 Murtho	619.8	19.25	19.27	21.03	20.50
Renmark	567.4	-	-	18.54	18.04
Lock 5	562.4	16.30	16.34	18.07	17.50
Lyrup	537.8	-	-	16.85	16.26
Berri	525.9	-	13.18	15.81	15.74
Lock 4	516.2	13.20	13.22	15.65	15.08
Loxton	489.9	-	-	15.05	14.12
Cobdogla	446.9	-	-	13.44	12.38
Lock 3	431.4	9.80	9.80	13.16	12.02
Overland Corner	425.9	-	6.27	12.73	11.58
Waikerie	383.6	-	6.29	11.26	10.24
Lock 2	362.1	6.10	6.10	10.28	9.30
Cadell	332.6	-	3.30	9.17	8.08
Morgan	321.7	-	3.27	8.85	7.65
Lock 1 Blanchetown	274.2	3.20	3.22	6.81	5.38
Swan Reach	245.0	0.75	0.61	6.06	4.51
Mannum PS	149.8	0.75	0.60	3.15	1.90
Murray Bridge	115.3	0.75	0.55	2.06	1.26

Note that the above water levels may be affected by local wind conditions.
