

# RIVER MURRAY FLOW REPORT

Public I2 A2

Report #32/2014

Issued 10:00 am 8 August 2014

**This supersedes the previous flow report issued by the Department of Environment, Water and Natural Resources (DEWNR) on 1 August 2014. The next flow report, including the water resources update, will be provided on Friday, 15 August 2014.**

In this report, for ease of representation, large volumes of water are expressed in gigalitres (GL), while smaller volumes are expressed in megalitres (ML). One GL is equal to 1 000 ML.

## FLOW OUTLOOK

The flow at the South Australian border is approximately 18 GL/day and will remain around this rate during the coming week, depending on upstream river and storage operations, extractions, and rainfall events. The flow comprises the normal August Entitlement Flow of 4 GL/day plus unregulated flow.

Construction works at the Lake Victoria outlet regulator will continue into late August 2014. These works are restricting the outlet capacity. DEWNR is working closely with the Murray-Darling Basin Authority and SA Water to manage the flow to South Australia during this time.

The flow over Lock 1 is approximately 15 GL/day and will increase to around 16.5 GL/day during the coming week, depending on weather conditions and extractions.

It is important to note that flow forecasts in this advice are based on the information available at the time of preparation. They may change as new gauging information becomes available, or due to rainfall events or changed operations upstream. Flow forecasts are dependent on predictions made by the Bureau of Meteorology, Murray-Darling Basin Authority and water management agencies in upstream jurisdictions. They will be revised as new information becomes available.

## WEIR POOL OPERATIONS

DEWNR is currently raising the Lock 1 and 2 weir pools within their normal operating range (up to 0.3 m above full supply level) due to the availability of unregulated flow. DEWNR is currently considering raising these weir pools to slightly above their normal operating range to mimic natural water level variability, which has been largely removed through river regulation. It is anticipated that the weir pools may be raised up to 0.5 m above full supply level, or 0.2 m above the maximum normal operating range. The objective is to promote a range of benefits, specifically restoration of ecological function. Further advice in relation to this potential action will be provided in a separate media release.

## MANAGEMENT OF SOUTH AUSTRALIA'S DEFERRED WATER

On 1 July 2014, South Australia had deferred 30 GL of its Entitlement Flow into storage to meet critical human water needs use in future dry years and 20 GL for private carryover use in future dry years. The volume of deferred water in the upstream storages is adjusted for net evaporation losses until it is delivered to South Australia. There is currently a high risk of some private carryover water spilling from Lake Victoria, with a physical spill at Lake Victoria likely to occur during the next month. South Australia cannot defer any water while receiving unregulated flow and is therefore not proposing to defer any Entitlement Flow during August 2014.

DEWNR is investigating opportunities to defer additional Entitlement Flow during 2014-15.

## BARRAGE OPERATIONS AND WATER LEVELS IN THE LOWER LAKES

The water level in Lake Alexandrina is approximately 0.84 m AHD and approximately 0.86 m AHD in Lake Albert. The levels will be maintained at around 0.85 m AHD for a few more days to improve water exchange between the two lakes. The levels will then be lowered to a target of 0.70 m AHD, with possible further lowering

depending on the duration of unregulated flow. The aim of the short-term water level raising is to assist with improving water quality in Lake Albert.

SA Water will continue to operate the barrages to minimise any negative salinity impacts from reverse flow events. When conditions are conducive to opening the barrages, releases will be prioritised through Tauwichee and Goolwa. All fishways are in operation.

To see live salinity data at various locations on the River Murray and in the Lower Lakes, please refer to the following website: <http://www.waterconnect.sa.gov.au/Systems/RTWD/SitePages/Home.aspx>

Water levels and barrage operations are monitored closely by various agencies of the South Australian Government, Murray-Darling Basin Authority and Commonwealth Environmental Water Office.

### **WATER QUALITY – Blue-Green Algae**

The New South Wales Government (through Regional Algal Coordinating Committees) has a red alert warning for toxic blue-green algae at Balranald on the Murrumbidgee River, where water is unsuitable for recreational and stock watering purposes.

Although toxic blue-green algal blooms pose no threat to South Australia at this stage, the Murray-Darling Basin Authority and the relevant South Australian Government agencies are regularly monitoring the situation.

### **NAVIGATION ISSUES**

Sandbars in the vicinity of the Murray Mouth may cause navigation hazards. Mariners are advised to navigate with caution when operating in the area. Sandbars are also present along sections of the River Murray, downstream of Lock 7 and 8 and in South Australia. All watercraft users should be aware of the risk of submerged navigation hazards, and should regularly check the river depth.

### **CONSTRUCTION WORKS**

#### *Yatco Lagoon*

Work has commenced to relocate pump offtakes from Yatco Lagoon. Work to install new pump offtakes on the River Murray will commence in the coming months. The construction work is expected to be completed by early 2015.

#### *Lock 4*

Remedial works at Lock 4 commenced on 5 May 2014 and are expected to be completed next week. The works are necessary to improve the structural integrity of the Lock chamber. During this period Lock 4 will be closed to navigation.

#### *Deep Creek (Pike Floodplain)*

Work to replace the Deep Creek regulating structure and construction of a vertical slot fishway commenced on 4 August 2014. On 11 August 2014, work will commence to block-off Deep Creek from the River Murray through the installation of a coffer dam. Deep Creek flow will be maintained throughout the construction period via a temporary diversion pipe. Construction is expected to be completed by mid-December 2014. Traffic conditions on the Lock 5 Road will be changed during this period.

#### *Chowilla*

Construction of the Chowilla Creek Environmental Regulator and associated structures is nearing completion. For public safety reasons, the Chowilla Creek remains closed to navigation at the construction site at this time.

#### *Lake Victoria Outlet Regulator*

Remedial works on the Lake Victoria Outlet Regulator are underway and expected to be completed in late August 2014. The works are necessary to improve the structural integrity of the regulator.

Camping is not allowed in the area immediately downstream of the regulator during the construction period. There are alternate camping sites nearby, along Rufus River.

## River Murray Flow Report

### Lock 11

The mechanised gates at Lock 11 (Mildura) are now installed and the weir pool is gradually being reinstated (expected to be at full supply level during next week).

### RIVER MURRAY WATER LEVELS

Below is a table of River Murray water levels at a number of locations from Lock 10 (near Wentworth) to Murray Bridge.

**River Murray Water Levels on 6 August 2014**

Location	River km	Normal Pool Level	Current Level (m AHD)	1974 Flood Level (m AHD)	1993 Flood Level (m AHD)
Lock 10	825.0	30.80	30.79	33.81	33.32
Lock 9 Kulnine	764.8	27.40	27.55	30.03	29.44
Lock 8 Wangumma	725.7	24.60	24.86	27.60	27.19
Lock 7 Rufus River	696.6	22.10	22.21	25.70	25.24
Lock 6 Murtho	619.8	19.25	19.25	21.03	20.50
Renmark	567.4	-	-	18.54	18.04
Lock 5	562.4	16.30	16.32	18.07	17.50
Lyrup	537.8	-	13.34	16.85	16.26
Berri	525.9	-	13.26	15.81	15.74
Lock 4	516.2	13.20	13.22	15.65	15.08
Loxton	489.9	-	10.50	15.05	14.12
Cobdogla	446.9	-	9.95	13.44	12.38
Lock 3	431.4	9.80	9.82	13.16	12.02
Overland Corner	425.9	-	6.63	12.73	11.58
Waikerie	383.6	-	6.53	11.26	10.24
Lock 2	362.1	6.10	6.13	10.28	9.30
Cadell	332.6	-	3.53	9.17	8.08
Morgan	321.7	-	3.44	8.85	7.65
Lock 1 Blanchetown	274.2	3.20	3.23	6.81	5.38
Swan Reach	245.0	0.75	1.03	6.06	4.51
Mannum PS	149.8	0.75	0.83	3.15	1.90
Murray Bridge	115.3	0.75	0.79	2.06	1.26

Note that the above water levels may be affected by local wind conditions.
