

RIVER MURRAY FLOW REPORT

Public I2 A2

Report #8/2017

Issued 10:00 am 24 February 2017

This supersedes the previous flow report issued by the Department of Environment, Water and Natural Resources (DEWNR) on 17 February 2017. The next report will be provided on Friday 3 March 2017.

In this report, for ease of representation, large volumes of water are expressed in gigalitres (GL), while smaller volumes are expressed in megalitres (ML). One GL is equal to 1 000 ML.

FLOW OUTLOOK

The flow at the South Australian border is approximately 8 GL/day and will remain around this rate during the coming week. It comprises:

- normal February Entitlement Flow 6.9 GL/day;
- plus environmental water;
- minus deferred water; and
- interstate trade adjustments.

The flow over Lock 1 is approximately 5 GL/day and will remain around this rate during the coming week, depending on weather conditions and extractions.

It is important to note that flow forecasts in this advice are based on the information available at the time of preparation. Advice may change as new gauging information becomes available, or due to rainfall events or changed operations upstream. The forecasts will be revised as new information becomes available.

ENVIRONMENTAL WATER

In addition to environmental water held on South Australian water licences, approximately 75 GL of environmental water will be delivered to South Australia during February. The environmental water will provide in-channel, Lower Lakes and Coorong environmental and water quality benefits. Larger volumes of environmental water are expected to be delivered during March, with up to 137 GL likely to flow across the border, subject to upstream operations. This is significantly higher than the 40 GL delivered in March 2016.

DEWNR is continuing discussions regarding environmental water to be delivered during 2016-17.

MURRAY MOUTH

Dredging operations at the Murray Mouth commenced on 9 January 2015 to maintain connectivity (exchange of water) between the Coorong and the Southern Ocean.

The dredging operations combined with recent substantial barrage releases have improved conditions at the Murray Mouth. As the unregulated flow event has now ceased, the dredging program is being reviewed to determine if dredging should continue. One dredge is currently operating in the Goolwa and Tauwitschere channels. At 19 February 2017, a total of approximately 1 829 700 cubic metres of sand had been removed by dredging operations since commencement.

Mariners are advised that there are still a number of shallow zones in and adjacent to the Murray Mouth and should follow all directions in the area and reduce their speed. Boats equipped with echo sounders should regularly check depths and avoid travelling at low tide. Mariners are reminded that navigation through the Murray Mouth is only permitted during daylight hours and that Exclusion Zones established around the dredging operations are in place to ensure public safety. Refer to Notice to Mariners No 42 of 2016

www.dpti.sa.gov.au/news?a=287322

There is a partial park closure in place for the northern tip of the Coorong National Park. For more information visit www.environment.sa.gov.au/parks/Safety/Park_closures/141219-coorong-national-park.

BARRAGE OPERATIONS AND WATER LEVELS IN THE LOWER LAKES

The water level in Lake Alexandrina is approximately 0.81 m AHD and Lake Albert approximately 0.77 m AHD. The difference in water levels is due to wind effects. Water levels are being actively managed to achieve a target water of approximately 0.5 m AHD by the end of April 2017.

Barrage releases are being prioritised at Tauwitchere and Goolwa barrages. All fishways are operational and providing fish passage between Lake Alexandrina and the Coorong. During the week ending 21 February 2017 total barrage releases were approximately 14 GL.

During adverse weather conditions SA Water will operate the barrages to minimise the risk of seawater entering Lake Alexandrina, therefore minimising any negative salinity impacts from reverse flow events.

Water levels and barrage operations are monitored closely by the South Australian Government, the Murray-Darling Basin Authority and the Commonwealth Environmental Water Office.

WEIR POOL OPERATIONS

The Lock 1 weir pool is approximately 0.1 m below the normal pool level of 3.2 m AHD to enable engineering works to be undertaken at the weir.

NAVIGATION ISSUES

Sandbars in the vicinity of the Murray Mouth may cause navigation hazards. Boaters are advised to navigate with caution when operating in the area. Sandbars are also present along sections of the River Murray downstream of Locks 7 and 8 and in South Australia. All watercraft users should be aware of the risk of submerged navigation hazards, and should regularly check river depth.

River Murray Flow Report

RIVER MURRAY WATER LEVELS

Below is a table of River Murray water levels at a number of locations from Lock 10 (near Wentworth) to Murray Bridge.

River Murray Water Levels

Location	River km	Normal Pool Level (m AHD)	Current Level 22/02/2017 (m AHD)	1974 Flood Level (m AHD)	1993 Flood Level (m AHD)	2016 High Water Level (m AHD)
Lock 10	825.0	30.80	30.86	33.81	33.32	32.72
Lock 9 Kulnine	764.8	27.40	27.29	30.03	29.44	28.85
Lock 8 Wangumma	725.7	24.60	24.12	27.60	27.19	26.85
Lock 7 Rufus River	696.6	22.10	22.13	25.70	25.24	24.97
Lock 6 Murtho	619.8	19.25	19.29	21.03	20.50	20.19
Renmark	567.4	-	16.33	18.54	18.04	17.44
Lock 5	562.4	16.30	16.33	18.07	17.50	17.05
Lyrup	537.8	-	13.27	16.85	16.26	15.80
Berri	525.9	-	13.25	15.81	15.74	15.21
Lock 4	516.2	13.20	13.24	15.65	15.08	14.73
Loxton	489.9	-	10.11	15.05	14.12	13.54
Cobdogla	446.9	-	9.84	13.44	12.38	11.59
Lock 3	431.4	9.80	9.80	13.16	12.02	10.98
Overland Corner	425.9	-	6.27	12.73	11.58	10.41
Waikerie	383.6	-	6.25	11.26	10.24	9.20
Lock 2	362.1	6.10	6.10	10.28	9.30	8.32
Cadell	332.6	-	3.24	9.17	8.08	7.01
Morgan	321.7	-	3.16	8.85	7.65	6.38
Lock 1 Blanchetown	274.2	3.20	3.11	6.81	5.38	4.46
Swan Reach	245.0	0.75	0.66	6.06	4.51	3.11
Mannum PS	149.8	0.75	0.67	3.15	1.90	1.33
Murray Bridge	115.3	0.75	0.62	2.06	1.26	1.04

Note that the above water levels may be affected by local wind conditions.
